# 10 Pilot Plant

**Demolition Completion:**
## May 2004

**Mission:**
Contained pilot processes and equipment that were used in the design of all the chemical and metallurgical production plants at Fernald.

**Demolition Insight:**
The structural members of the Pilot Plant were constructed of concrete and required pulverizing equipment to demolish them. The other nine plants were constructed with steel structural members.

**Interesting Fact:**
The Pilot Plant was the first of ten plants constructed at the Fernald site and in October of 1951 the production era began when workers produced their first uranium metal in the plant.

**Fluor Fernald**

**2006 FERNALD**
*committed to Safe closure*
